Sinks

Perfection

Sinks are the most frequently used items in the kitchen – and they have to take a lot of rough treatment. Good reasons to choose them carefully! Reasons to opt for the premium sinks from NABER-CONTURA®, because their appealing design and perfect quality convince with every use. The extremely versatile range in the materials stainless steel, ceramic and composite offers just the right sink for all furnishing styles and individual wishes.

Stainless steel sinks are unbeatably hard-wearing and extremely easy to care for: a fascinating eye-catcher! The high-quality porcelain stoneware of the ceramic sinks with their reserved elegance can handle even the toughest demands. Valuable detail: the convincing colour and shape variants. The composite sinks entice with the touch of their incomparably sleek surface. The Cin-Nagranit material, inspired by nature, guarantees exceptional colour intensity and beauty with outstanding durability, even after many years of use.

Whichever sink you pick: NABER-CONTURA® is always a highlight in the kitchen!

Types of installation

Perfectly integrated
in every way

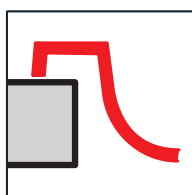

Sinks with flat edge

Adapted to the materiality of the work surface, surface or flush mounted, attractively minimalist sink optics are combined with maximum functionality.

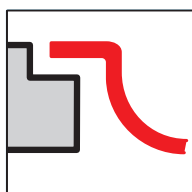

For surface or inset mounting of the sink, depending on the nature of the work surface.

Installation from above

Sinks with classic profiled outer edge for various daily use.

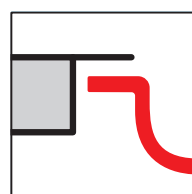

Faster and easier surface mounting in all types of work surfaces.

Flush installation

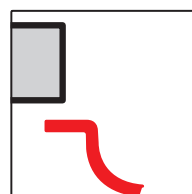

Flush installation combines the sink and work surface in an elegant combination and offers maximum convenience.

Especially recommended for granite, stone and glass work surfaces.

Flush installation from below

The laminate decor of the worktop borders on the edge of the bowl or the draining surface. A permanent bond under the laminate ensures easy working on one level.

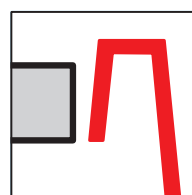

Sinks for installation from below

Continuous sealed work surfaces with classical sinks installed from below highlight the material of the work surface and offer continuous convenience without bothersome edges.

Ideal for work surfaces in granite, stone, artificial stone, ceramic and glass.

(Special mounting solutions or bonding provide a durable connection between work surface and sink.)

Sink module between work surfaces

Solitaire sink modules or classic butler sinks integrated as preparation and dishwashing centres between the adjacent work surfaces open up functional areas with a special flair.

Compatible with all types of work surfaces.

Stainless steel

Properties

Stainless steel sinks

are made of standardized stainless steel 18/10, i.e. 18 % chrome + 10 % nickel which results in a high quality alloy (**material no. 1.43019**).

Therefore, you receive a non-porous surface, which is easy to clean and corrosion and heat resistant.

Flat edge

Due to their especially flat edge, the ranges Corno Piu and Corno Basso ensure a harmonious transition to the worktop in the kitchen. Therefore, no dirty edges form around the sink.

Stainless steel

Care instructions

Rust

Given common household wear and regular maintenance of the sink, no rust will be able to form. Small iron and rust particles from the water pipe may, especially in case of new buildings or maintenance work performed on the pipes, give the impression of traces of rust. You should therefore observe the following tips when taking care of your stainless steel sinks:

- Regularly remove dirt and lime deposits.
- Do not use a cleaning agent containing chlorine (usually sodium hypochlorite) or hydrochloric acid.
- If you use steel wool for cleaning, then it must consist of "Stainless steel rust-free".
- Avoid longer exposure to liquids with a high concentration of common salt.
- Avoid direct, long-term contact to rusting iron parts (for instance cast-iron pans or iron filings).

Spotty contamination

is usually caused by lime scale, occurring more or less, depending on the hardness of the drinking water supplied (information is provided by the community waterworks). This tends to bind dirt particles, so that this spotty contamination is created after only a short time.

- You can prevent such spots by drying the sink after each use.
- Should spots still occur, then use any commercially available cleaning agent for stainless steel care and lime scale.
- We recommend use of the **stainless steel system care set*** for optimum daily cleaning and stainless steel care.

Scratch marks

Our stainless steel sinks with high gloss surface are manufactured with the greatest care and using state-of-the-art manufacturing and processing methods.

The material properties of stainless steel 18/10 currently still exclude absolute scratch resistance and small scratch marks are therefore normal. Only by means of regular care using the recommended care set **stainless steel system care set*** will a pearl-finished glossy surface be achieved after about 2-4 weeks.

- **Important:**
Make sure that the stainless steel surface is not treated against the polishing grain!

*You can order the **stainless steel system care set** as item no. 1111141. Further information on this also in catalog 2 TECH on page 151/25 EN.

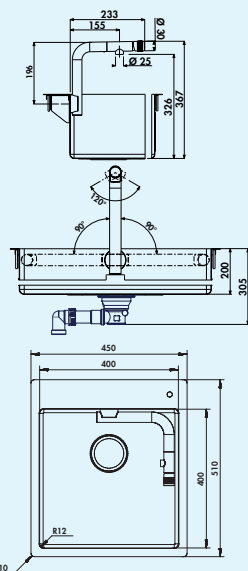

Corno Turno

With its permanently integrated faucet, a sink innovation becomes the centre of urban styled kitchens. Minimalist single-bowl aesthetics and high ease of use of the continuously 180° swivelling faucet stand for the perfection of a unique stainless steel combination. Intuitive and capable of being sunk into the bowl in one movement, the elegant faucet clears the way for perfect installation in front of a window at worktop level.

The rotating spout enables vertical water flow in any position.

In addition, valuable work surface is created by the two-piece optional cover that bridges the entire sink. Plenty of free space for all preparatory work and the faucet can still be used in the middle position due to a cut-out. Stainless steel quality with a material thickness of 1 mm ensures high quality and dimensional stability in either surface-mounted or flush-mounted installation. Sink and mixer concealed with chopping board serves as free work surface especially practical in small kitchens.

Design by tbSTUDIO, Berlin.

Corno Turno 50

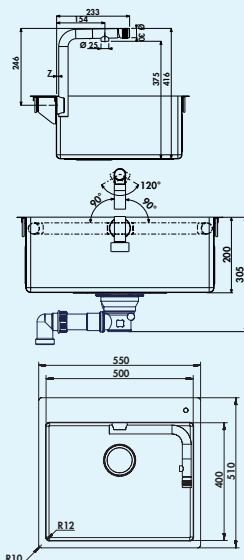

Built-in sink. 3 1/2" basket strainer valve flush with push-button excenter fitting. With single-lever mixer integrated into the bowl wall, stainless steel finish, swivel spout 180°, 120° rotating.

- **flat edge: also suitable for flush mounting**
- suitable for worktop thicknesses from 10 mm to 40 mm
- cut-out approx. 435 x 495 mm (built-in sink)
- bowl depth 200 mm
- with integrated single-lever mixer, stainless steel finish, high pressure
- infinitely 180° swivelling and positioning
- vertical water outlet in every position of the faucet
- ergonomic operation by single-lever mixer at the outlet end
- windows can be planned on worktop level and are simply opened

Corno Turno 50/60

Urban-style kitchens are experiencing an innovation in sinks

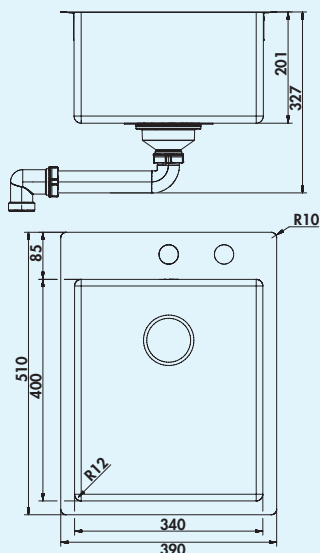

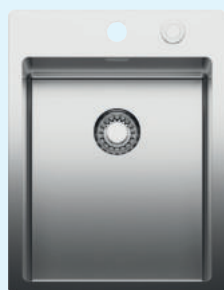

Corno Piu PR

In terms of form and style, the new Corno single basin series with integrated tap ledge focuses on minimalist, straight-line design, small bowl and edge radii and on the particular valency achieved by the highly durable quality of the 1 mm thick stainless steel material.

A push-button elegantly integrated flush into the tap ledge opens and closes the standard eccentric fitting with **strainer basket valve which is flush to the bottom**. The discreet **overflow** blends in **flush** with the sink geometry. The narrow rim ensures flat surface-mounted installation as well as flush installation. The wet ground finish creates a fine structure that makes the surface less susceptible to signs of use, facilitates the cleaning of the sink and allows water to drain more easily.

Corno Piu PR2

Built-in sink. Single bowl. 3½" basket strainer valve flush with push-button excenter fitting in stainless steel and basket strainer valve flush with the bottom.

Corno Piu PFU

The further developed Corno single basin series is characterised by symmetrical edge geometry and small basin and edge radii. The precise processing of the 1 mm thick stainless steel material guarantees a high level of durability and quality in use. Aesthetics in detail are evident in the **flush integrated overflow** and the strainer **basket valve integrated flush with the bottom**. The all-round narrow bowl rim ensures flat surface-mounted installation, flush installation and problem-free substructure installation.

The wet ground finish creates a fine structure that makes the surface less susceptible to signs of use, facilitates the cleaning of the sink and allows water to drain more easily.

Suitable for worktop thicknesses from 10–40 mm (built-in sink) and from 20 mm (sub-structure sink).

Corno Piu PFU2

Built-in/sub-structure sink. Single bowl. 3½" drain and spill-over fitting with basket strainer valve flush with the bottom. When using the mounting brackets supplied, the installation width required increases by approx. 30 mm per side in case of the sub-structure sink.

Corno Basso PR

The understated design of the all-round sink rim is continued in the integrated faucet bench of the Corno Basso PR series. Thus, each built-in sink model convinces with contemporary minimalism. Recommended combinations of sink and faucet are presented as a set offer. The streamlined and symmetrical stainless-steel sinks are ideal for flush and surface-mounted installation. Both options ensure a harmonious transition to the worktop. The Corno Basso PR models feature the small bowl and rim radii typical of the Corno series. Thanks to the first-class workmanship of the stainless-steel material, they are extremely hard-wearing and easy to clean.

Corno Basso

The new Basso series fits conceptually into the minimalist Corno design concept with individual bowls for built-in or substructure installation, and is characterised by a straightforward design language, symmetrical edge geometry and small bowl and edge radii. Values such as durability and quality in use are guaranteed by the particularly precise processing of the 1 mm thick stainless steel material. The all-round narrow bowl rim ensures flat surface-mounted installation, flush installation and problem-free substructure installation. With four bowl sizes and faucet set combinations, a wide range of kitchen plans can be realised. Optional accessories such as the stainless steel push button, half sink, draining tray and chopping board complete the exclusive Corno own-brand range.

The wet ground finish creates a fine structure that makes the surface less susceptible to signs of use, facilitates the cleaning of the sink and allows water to drain more easily.

The sinks are suitable for worktop thicknesses from 10–40 mm (built-in sink) and from 20 mm (sub-structure sink).

Corno Basso 2

Built-in/sub-structure sink. Single bowl. 3½" drain and spill-over fitting. When using the mounting brackets supplied, the installation width required increases by approx. 30 mm per side in case of the sub-structure sink.

Corno Ora

The timeless, purist design of the Corno Ora also follows the basic design principle of the Corno line: to reduce form and function to the essentials. Flat rim and narrow radii (15 mm) are the defining features. The ergonomic arrangement of deep basin and large draining board, connected by a guide rail along the complete longitudinal axis for the flexible placement of a chopping board, facilitate the work processes during rinsing and preparation. High quality and dimensional stability with flush and surface installation is ensured by the production of stainless steel in 1 millimetre material thickness. The sink is equipped with a reinforced tap ledge for stable mounting of the faucet. In addition, the platform is reinforced for increased stability and high-quality acoustics.

OrderNo. 1014042

Corno Ora

Built-in sink. With draining surface. 3½" basket strainer valve flush, rotational knob excenter fitting.

Flat edge: also suitable for flush installation

- suitable for worktop thicknesses from 30 mm to 40 mm

Ceramics

PickUP + LineUP –
High-grade ceramics when the
highest quality is needed

Naber's new PickUP + LineUP ranges of ceramic sinks win every respect. The high-quality fine stoneware is elaborately manufactured with selected craftsmanship. Each product is carefully cast, polished, glazed, fired, ground and then thoroughly inspected.

As a result, the product is particularly resistant and safe to withstand extreme demands.

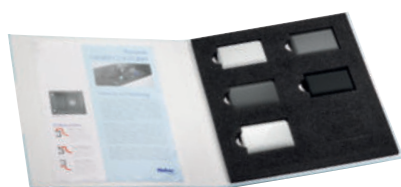

PickUP + LineUP ceramic kitchen sinks are incredibly resistant! The sinks are particularly easy and problem-free to clean, they are completely odourless and tasteless. Due to their high scratch resistance, the sinks can even be used as a cutting surface. **PickUP + LineUP** sinks

are impact-resistant and resistant to cold, heat and acids. Not even colour-intensive food or household chemicals leave any traces!

Five different installation types, four colours and an attractive range of shapes create variety. In our own sample book, the choice of colours is haptically and impressively documented.

Naber PickUP + LineUP ceramic sinks can be integrated into kitchens of any style and quickly become a valuable, practical and aesthetic eye-catcher.

Extended warranty

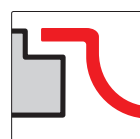

Due to their extraordinary insensitivity and excellent quality of use, we give a **5-year warranty** against manufacturing defects on the luxury ceramic sinks PickUP + LineUP.

Installation types

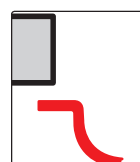

Installation from above

Sinks with classic profiled outer edge for versatile daily applications. Quick and easy installation in all types of worktops.

Flush mounting

The flush-mounted installation combines sink and worktop in an elegant combination and offers the highest level of comfort.

Sinks for substructure

Continuous closed worktops with traditionally undermounted basins accentuate the material of the worktop and offer comfort without disturbing edges.

INFO BROCHURE

naber.com/en/downloads/

PickUP

Best ceramic, smart design –
remarkably practical in daily use

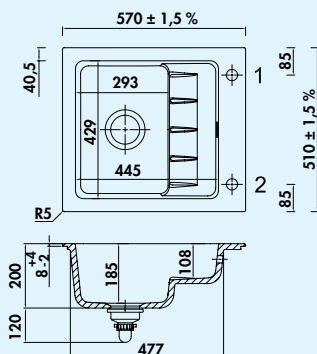

PickUP E

With increasing awareness of a resource-friendly use of water, smart sink concepts such as PickUP E are coming to the fore. High-quality ceramic and a ledge integrated into the bowl make this single bowl sink so unique. You don't always need a full sink to wash up a few glasses, cups and cutlery items and then drain them on the lower second level – which is also a practical place to put scrubbed vegetables, peelings and cuttings. Even the washing of a baking tray is part of the creative solution of a single bowl geometry for the economical routine of everyday washing up. Available in five colour variants, PickUP E can be integrated into any modern furnishing concept as a built-in sink.

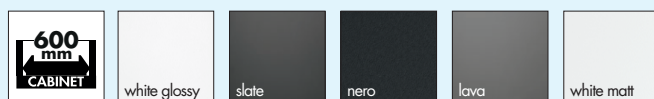

We recommend using a faucet with pull-out spout or shower head.

5 years manufacturer's warranty (except on wearing parts)

Design by Hans Winkler Design, Grafenau.

Order-No. 1091038

PickUP E

Built-in sink. Ceramic, single bowl with second level, reversible, 3 1/2" basket strainer valve flush with premium rotational excenter fitting, chromed, drill hole 1+2 drilled through.

- suitable for worktop thicknesses from 30 mm
- cut-out approx. 540 x 480 mm, R 5 mm

1091001	white glossy	951.18 €
1091002	slate	951.18 €
1091003	nero	951.18 €

Optional accessories

1091038	Bowl insert, stainless steel	185.91 €
1091039	Chopping board made of bamboo, oiled	172.08 €

PickUP F

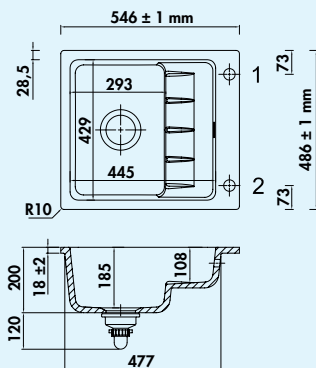

As a flush mounting variant, PickUP F is based on the trend towards edgeless integration into the worktop. The optical component not only upgrades the sink area stylistically, it is also easier to clean - a thoroughly important comfort aspect for kitchen planning. PickUP F also offers the choice between five colours, giving you the opportunity to set further individual accents.

We recommend using a faucet with pull-out spout or shower head.

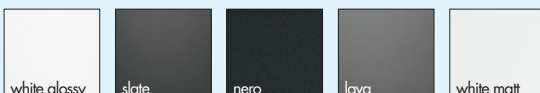

Sink with milled outer edge for flush mounting. Worktop thickness min. 30 mm. Attention: In the cutout, a chamfer of 2 mm x 45° has to be applied to the upper edge!

5 years manufacturer's warranty (except on wearing parts)

Design by Hans Winkler Design, Grafenau.

Order-No. 1091038

PickUP F

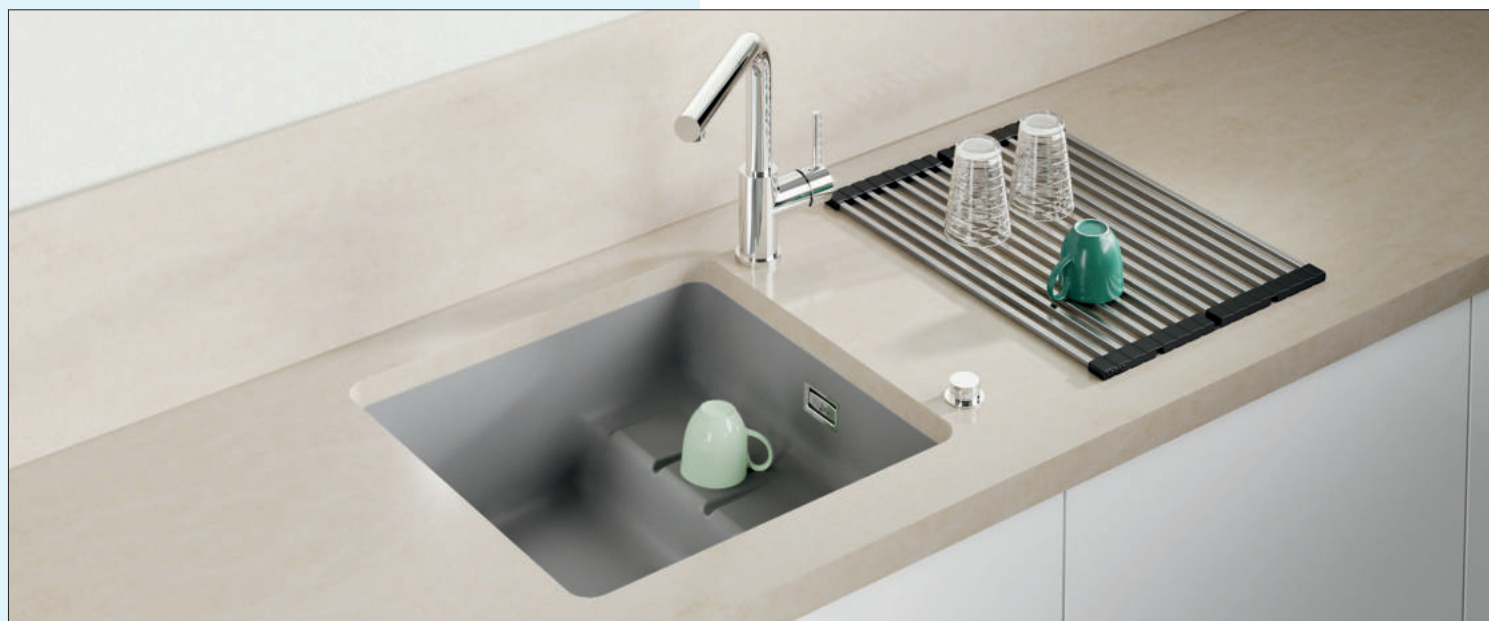

Built-in sink for flush mounting. Ceramic, single bowl with second level, reversible, 3 1/2" basket strainer valve flush with premium rotational excenter fitting, chromed, drill hole 1 + 2 drilled through.

- suitable for worktop thicknesses from 30 mm
- requires beading all round or a support bar (beading depth 25 mm, beading width 8 mm)
- cutout dimensions approx. 550 x 490 mm, R 12 mm

1091011	white glossy	1033.32 €
1091012	slate	1033.32 €

Optional accessories

1091038	Bowl insert, stainless steel	185.91 €
1091039	Chopping board made of bamboo, oiled	172.08 €

PickUP U

Designed for rimless substructure mounting, the sink contour of the PickUP U directly adjoins the worktop cut-out. Pure aesthetics, which convey a more generous effect of the dishwashing area and the environment in a purist elegant way. It is particularly appreciated by planners when combined with stone, concrete and ceramic worktops. The trendy five-colour concept of the PickUP U offers versatile design options.

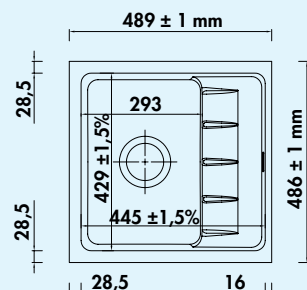

We recommend using a faucet with pull-out spout or shower head.

Sink with milled outer edge for sub-structure mounting. Worktop thickness min. 30 mm. If the sub-structure sink is glued, thinner worktops can be used.

Due to the tolerance, we recommend that you make the cutout based on the supplied bowl.

5 years manufacturer's warranty (except on wearing parts)

Design by Hans Winkler Design, Grafenau.

PickUP U

Substructure sink. Ceramic, single bowl with second level, reversible, 3½" basket strainer valve flush with premium rotational excenter fitting, chromed, **without** drill hole.

- suitable for worktop thicknesses from 30 mm
- cutout dimensions approx. 433 x 417 mm, R 19 mm
- no tap hole bank: provide holes for faucet and excenter in the worktop
- incl. mounting material

LineUP 2E

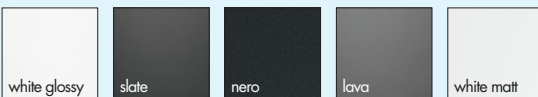

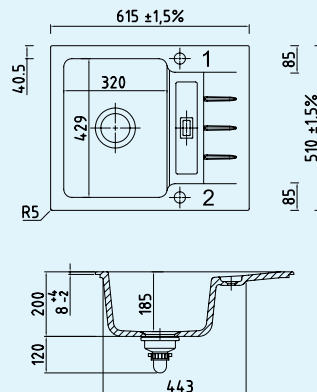

High-quality ceramic built-in sink in a contemporary look. A deep bowl as well as a small, slightly inclined integrated draining surface with practical drip tray determine the clear design language of the new model series. Cleverly designed, with its continuous material thickness, the edge-mounted sink widens in the area of the tap ledge. Plannable in reverse and available in five colour variants, LineUP 2E meets all the requirements for furnishing and equipping smaller wash stations.

5 years manufacturer's warranty (except on wearing parts)

Design by Hans Winkler Design, Grafenau.

Lavara/Patera –
counter-top basins for stylish living

Lavara and **Patera** give nothing but pleasure! The counter-top basins made of high-quality porcelain stoneware are timelessly beautiful in form and of superior ceramic quality. They are therefore among the selected details of a well-kept living atmosphere.

Modern colour variations ensure a seamless connection with all upmarket interiors. Whether round or square – together with the precisely matching, perfectly shaped faucet, an ensemble is created that adds unobtrusive elegance to its surroundings.

NABER-CONTURA®

Composite

Cin Nagraanit – seduction for the senses

Cin-Nagraanit sinks are an excellent choice in which sensory attractiveness and rational aspects are perfectly harmonised. So the decision for the composite material of the sinks is only logical: it has advantages, the combination of which can hardly be achieved by other materials.

First and foremost is the outstanding resilience. Cin-Nagraanit sinks are inspired by nature and are made with a high component of quartz stone using state of the art technology. Cin-Nagraanit is water, scratch and stain-resistant, non-swelling, easy to clean, food safe and extremely durable. Even after many years of use, Cin-Nagraanit retains its distinct colour intensity and beauty.

In addition, Cin-Nagraanit sinks lure with the seductive Touchfeel of an incomparably smooth surface and a varied range of colours and shapes. The best impression of this is conveyed by the Cin-Nagra-

anit sample case. Emotionally strong tactile and visual stimuli impressively enable you to experience the sink surface, which is both robust and velvety, and simply invites you to touch it.

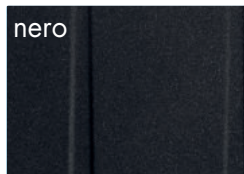

Sharp-contoured lines and unobtrusively elegant granite colours support the creative adaptation of the Cin-Nagraanit sinks to all styles of kitchen. To make diverse personal design wishes possible, Cin-Nagraanit sinks are also optionally available with matching faucets. It is only natural that we also pay attention to the highest quality! The design and unsurpassed functionality of the faucet and sink thus convey an evident characteristic of outstanding kitchen architecture.

NABER-CONTURA® composite sinks are tested according to the European standard BS ES 13310:2015 and can easily be used in combination with hot water fittings (+/- 100 °C).
